POSITION TITLE: Technical Project Lead

Description:	Would you like to put your leadership skills to work without giving up coding? Have you put your experience coding software and developing web-based applications to use in guiding software development teams? Are you interested in working full time for a mid-sized company that promotes a positive work-life balance requiring in-office workdays in Boston only two days per week? Commonwealth Automobile Reinsurers (CAR) is seeking a software development professional to join our team. This position is responsible for development and maintenance of mainframe and client/server applications, including overseeing staff resources needed to accomplish assigned projects. The successful candidate will partner with the business units to develop solutions that ensure the successful accomplishment of the organization's objectives. The Technical Project Lead will employ a waterfall method of project management to guide the software development team through the project lifecycle, including evaluation of the business request, application design, program coding, user testing, and system implementation. To support CAR's legacy systems, the ideal candidate will also have experience coding in COBOL.
Salary Range:	Commensurate with experience.
Education/Skills:	- Bachelor's degree or equivalent work experience. - COBOL Development. - Knowledge/development of ASP.NET a plus. - Waterfall project management techniques.
Experience:	5 - 10 years as Project Leader or Lead Developer
Certification:
